Site development and planning for Residential sites.

A guest lecture was arranged for S.Y.B.Arch students for their subject development. It was conducted by Ar. Chandan Patil (M.Arch. Landscape) . The presentation was aimed at various agendas that should be considered while designing a site. It mainly focused on residential planning and how to connect open and built spaces with landscape. The presentation helped students in understanding various new concepts of residential landscape design and site development. They were explained the processes of designing and planning indoor as well as outdoor landscape spaces in co-relation with built spaces and site surroundings. Different materials and their use , use of native species of plants and different techniques were introduced that help not only the user but also is climate responsive, hence creating a sustainable planning.

The lecture was arranged with an aim to help students with their current design problem of designing a Vacation house at Gaganbawda. We also had an elaborate interactive session where the students actively participated.
