Brief description of the activity

A study visit to Nisarga Resort at Sadale Madale was organized to explore and understand resort design. The objective was to analyze the spatial planning and circulation patterns for various activities within the resort.

During the visit, students closely observed both the internal and external circulation, including all entry and exit points, room layouts, bed arrangements, restaurant spaces, staff facilities, and in-house service areas. They also took measurements of different rooms and associated toilet facilities to understand their spatial requirements within a resort context.

The insights gathered from this visit will significantly contribute to each student's individual design process. This enriching experience offered valuable practical exposure and served as a unique learning opportunity, leaving a lasting impression and inspiring these future architects in their design journey.

Outcome of the activity

The students gained a comprehensive understanding of the design requirements for a luxury resort. They analysed spatial planning and functionality in alignment with real-world standards.
